# Seminar on "Computer Architecture and Organization - Concepts and Implementation"
(March 16,2023)

A seminar was organized by the Computer Science department on various topics of Computer Architecture and Organization. All students of B.Sc having computer science were given topics and they demonstrated and explained the topic assigned by PowerPoint presentation. They were marked on their content, confidence, explanation and illustration. The audience included faculty and interested students of all the years. The seminar was organized with the aim that students get to know the main concept behind computer instruction operation andimplementation.

The seminar started fromvery basic definition of computer architecture and the difference between organization and architecture and then moved to some advanced topics such as Bus Architecture, Addressing Modes, Micro operations Programmed and Interrupt driven I/O. This was also a learning experience for the students. They asked questions to the participants to get a better understanding of the concept.
